

TASK 2 – Design the Next Integration

Overview. This document outlines the proposed workflow and implementation plan for the next iteration of the internal task portal. Part 1 is assumed to be released; the scope here is limited to the new Task 2 requirements.

1. Process Flow Map

Main flow: To Do → Assigned → In Progress → Upload Evidence → Review → Done.

Alternative review path: If evidence is rejected, the admin provides a reason and the task returns to the assigned user. The user updates the work, uploads new evidence, and submits it for review again.

- Admins can assign tasks to users; a normal user may self-assign an unassigned task.
- The assigned user manually starts the task and moves it to In Progress.
- The assigned user uploads evidence and submits the task for admin review.
- The admin approves the evidence to complete the task, or rejects it with a reason.
- Completed tasks are read-only.

2. Sprint Implementation Plan

Delivery approach. The work is planned across a maximum of two sprints. If a Sprint 1 item is not completed, it may move into Sprint 2 without adding another sprint.

Sprint 1 - Filters and Task Details

- Add filtering by task status.
- Add filtering by assigned person.
- Allow both filters to be used together.
- Add a dedicated task details page opened when a task is selected.
- Add any required API and data-model changes to support these features.

Acceptance criteria: Users can filter by status and assignee, combine both filters, and open the correct task details page from the task list.

Sprint 2 - Evidence and Admin Review

- Allow the assigned user to upload evidence from the task details page.
- Support multiple PDF, image, and document files, with an initial 5 MB limit per file.
- Store evidence files in private S3/object storage and store file metadata in the database.
- Allow the user to submit evidence for admin review.
- Allow an admin to review evidence and approve or reject it.
- Require a rejection reason and allow the assigned user to submit new evidence after rejection.
